To whom it may concern

Re Mr MAHMUDUR RAHMAN Age 63 years Resident in Bangladesh

I have been consulted by family of the above named gentleman who has under the care of Dr Fowaz Hossain and Dr MD Kamrulashan of United Hospital in Dhaka, Bhangladesh. The medical reports from both of them are attached.

It is clear that Mr Mahmudur Rahman has developed multiple disc prolapsed at C4 to C7 cervical vertebrae and more seriously disc prolapse at L4-5 lumbar spine. He is getting serious neurological symptoms - weakness of his legs and altered Bowel habit. Unless treated urgently surgically he is running the risk of serious permanent neurological damage to his sciatic nerves.

I would recommend that he travels Urgently to U.K. to see Mr James Allibone Consultant Spinal Neurosurgeon at the Wellington hospital, St John's Wood, London, NW8 9LE. Tel.

I have asked the family members to book an Urgent appointment to see Mr James Allibone. I have done a referral letter which is attached.

I would request the British Embassy in Bhangladesh to grant him a Visa o travel to U.K. as soon as possible.

yours sincerely

Dr Sirjit Seyan GMC 1736858 Mobile contact: 8773767488

Case Summary

MR. MAHMUDUR RAHMAN (Patient ID 1000314986), 63 year aged gentle man, got admitted on 23.11.16 in United Hospital Limited under Dr. Fowaz Hossain, Consultant, Gastroenterologist, with the complaints of severe weakness and severe backache impending to walk and sleep. He also C/O altered bowel habit for 1 month with H/O per rectal bleeding associated with weight loss for about 10 kg and severe vertigo. He had H/O TM Joint (Rt) repair which was done in UK. He is known case of HTN.

On admission, patient is conscious, oriented, Pulse- 69 bpm, BP- 140/90 mm of Hg, Temp-98°F, Heart-S1+S2+0, Lungs- Vesicular breath sound and no added sound, Abdomen- Soft, non-tender, bowel sound-present.

On Investigation:

Major findings are:

- 1. **MRI of Cervical Spine** Thecal indentation and bilateral neural foraminal narrowing at C4-5, C5-6 & C6-7 levels due to disc protrusion, disc bulge with posterolateral osteophytosis.
- 2. MRI of Lumbar Spine- Thecal indentation and bilateral neural foraminal narrowing at L4-5 level due to disc bulge with posterolateral osteophytosis and facet hypertrophy.

Vit-D: 12 ng/ml, PVR-74 ml.

During hospital stay, he was reviewed by Cardiologist, Neuromedicine, Orthopedic Surgeon, Neurosurgeon and Urologist. Expert Neurosurgical opinion was to go for urgent surgical intervention and preferably in abroad.

Initial clinical evaluation & relevant investigations are done. He was found to be suffering from severe Vit-D Deficiency due to inadequate sunlight exposure and now is getting Vit-D supplement in IM form. Anti-Hypertensive is adjusted by cardiologist. Neuromedicine opinion was that he is a case of Benign Paroxysmal Positional Vertigo (BPPV). Gastroenterology opinion was to do Upper GI Endoscopy and Colonoscopy to find out the cause of per rectal bleeding and weight loss.

Finally, the patient was evaluated as Cervical & Lumbar Spondylosis (Impending to walk & sleep), BPPV, Vit-D Deficiency, HTN, Dyslipidaemia, BEP. So, he needs urgent Neurosugical intervention.

I wish all the best of him.

Dr. Fower Hossain Consultant, Gastroenterology. United Hospital LTD.
